QUA JOURNEY...

GRANITE

2016

As QUA Granite, we started our journey with a kiln that has a daily capacity of 19.000 square meters.

In 2017, we increased our capacity to 38.000 thousand square meters per day with our second kiln. Our annual production has increased to 11 million square meters

2017

2021

In 2021, Ercanlar Group made a four-stage investment plan to increase its production capacity. This plan would increase our annual capacity of 11 million sqm to 41 million sqm.

With the commissioning of three new production lines with a capacity of 7.5 million square meters in 2022, the total capacity increased to 41 million square meters per year.

2022

The latest generation of ceramic tiles

Now in 7mm thickness

The New Standart

Qua presents solutions in line with new market needs with its new 7mm thick product line. These ceramic tiles are more environmentally friendly, weigh less and take up less space, providing a large number of advantages but always with the same resistance as the 10mm thick products.

Upgraded ceramic tiles for architecture Improved technical features

- Low deformation and high flexibility.
- Advantage of long-lasting use thanks to its high strength.
- Light weight.
- More resistant to breakage.

Stand out with an environmentally friendly product.

Greater sustainability

- Ensure less raw material consumption.
- Reduce the use of boxes and packages.
- Ensure more transport possibilities at one time and therefore, less fuel consumption.
- Save wood by minimizing the use of pallets.

Less weight and many advantages Architectural solutions

- Less load on buildings because of its lighter weight.
- More flexible and thinner.
- More resistant against breakage.
- Easier to apply as its weight is lower.

Highest efficiency from production to installation

Economical savings

- Lower logistics costs.
- Less weight, less transport costs.
- Less volume, less pallets and boxes.
- Less fuel consumption.

CALACATTA GOLDIE

Glazed Porcelain

The Calacatta Goldie collection is inspired by one of the most renowned and distinguished marbles in architecture, the Calacatta goldie, a marble characterised for its **beauty, spectacularity, and character**. We present our own porcelain reinterpretation with a set of veins that range from **gray and balanced tones to an intense golden color that contrasts sharply** with the rest of the piece.

AWARDED CERTIFICATIONS

The right to change the products and technical specifications is reserved by QUA Granite.

SURFACE SLIP RESISTANCE AND SUITABLE USING AREAS

At the moment there is no European norm that determines the demands for slip resistance. Therefore German Standarts are used for classification. The slip resistance is influenced by maintenance and wear. These two standards distinguish between the slipperiness of floor surfaces in areas.

- DIN 51130 where people walk with their shoes on R9 to R13

The R level indicates the angle of slippage.

THE MEASUREMENT METHOD SPECIFIED IN DIN51130 DISTINGUISHES AMONG THE FOLLOWING R SLIPPERINESS CLASSES AND PROVIDES INDICATIONS AS TO WHERE THEY MAY BE USED

- R9 (6° - 10°)** Entrances and stairways accessed from outside, restaurants, shops, clinics, hospitals, schools.
- R10 (10° - 19°)** Shared toilets and showers, small kitchens in restaurants and cafes, garages and basements.
- R11 (19° - 27°)** Food production facilities; Mid-sized kitchens in restaurants and cafes, working environments where there is a lot of water and sludge laboratories, laundries, hangars.
- R12 (27° - 35°)** Productions facilities for foods rich in fats such as dairy products, food oils, cured meats, large kitchens in restaurants and cafes, industrials areas where slipper substances are used
- R13 (>35°)** Places where large quantities of fats are used, food processing areas
